

Nexora Tech is a dynamic, innovation-driven technology startup founded in the heart of Tallinn, Estonia. The company was established in June 2024 by three ambitious entrepreneurs: Elina Voss, Arjun Mehra, and Kaspar Lind. Their shared vision was to build an AI-powered digital collaboration platform tailored for remote and hybrid teams, with a strong focus on real-time task automation, multilingual communication, and intuitive workflow management.

Founders:

- **Elina Voss** – CEO and UX Visionary: With a background in human-computer interaction and a passion for design thinking, Elina spearheaded the product experience strategy.
- **Arjun Mehra** – CTO and AI Architect: A machine learning expert from India, Arjun was responsible for the core AI engine and real-time processing modules.
- **Kaspar Lind** – COO and Systems Engineer: A systems design graduate from Estonia, Kaspar handled infrastructure, operations, and early team development.

Foundation Story: Nexora Tech was conceptualized during a remote hackathon focused on "Future of Work" tools. The trio met virtually, collaborated seamlessly across time zones, and realized the power of their combined skill sets. In just 48 hours, they built a prototype called "FlowSync"—an AI bot that summarizes team meetings and auto-generates task lists. The prototype won the hackathon and gained attention from angel investors.

With initial funding of €250,000 from Nordic Seed Capital, the team rented a co-working studio in Tallinn's Ülemiste City and officially incorporated Nexora Tech. Their core product, NexoraFlow, expanded the hackathon idea into a full-fledged AI workspace platform.

First Year Milestones (June 2024 - June 2025):

- **August 2024:** MVP launch of NexoraFlow for private beta users.
- **October 2024:** Secured partnership with a German HR SaaS company for pilot testing.
- **January 2025:** Achieved 1,000+ active users across 12 countries.
- **March 2025:** Raised €1M in seed funding led by FutureWorks Ventures.
- **May 2025:** Opened a satellite team in Lisbon, Portugal, focusing on multilingual NLP modules.

Core Values:

1. Human-first technology.
2. Radical transparency.
3. Inclusivity in design and operations.
4. Iterative innovation.

Vision Ahead: As Nexora Tech steps into its second year, it aims to introduce a no-code AI assistant builder, deepen integrations with enterprise tools like Slack and Asana, and scale the platform to 10,000+ users globally.

Conclusion: With a bold vision, user-centered approach, and a lean yet passionate team, Nexora Tech is emerging as a promising player in the evolving landscape of digital work collaboration.
